## Floods Directive

### FLOOD HAZARD MAPS AND FLOOD RISK MAPS

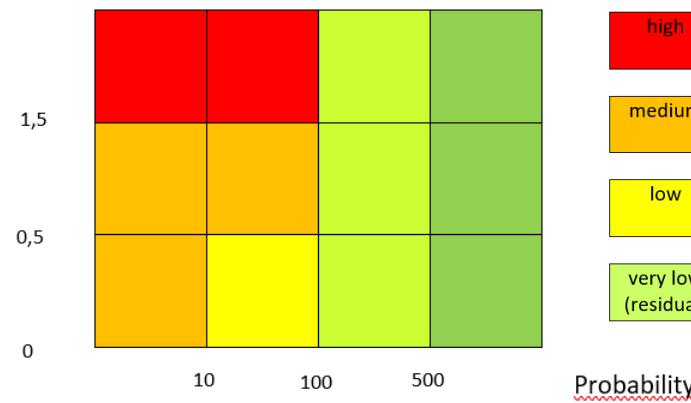

#### Article 6

1. Member States shall, at the level of the river basin district, or unit of management referred to in Article 3(2)(b), prepare flood hazard maps and flood risk maps, at the most appropriate scale for the areas identified under Article 5(1).
  
2. The preparation of flood hazard maps and flood risk maps for areas identified under Article 5 which are shared with other Member States shall be subject to prior exchange of information between the Member States concerned.
  
3. Flood hazard maps shall cover the geographical areas which could be flooded according to the following scenarios:
  - (a) floods with a low probability, or extreme event scenarios;
  - (b) floods with a medium probability (likely return period  $\geq 100$  years);
  - (c) floods with a high probability, where appropriate.
  
4. For each scenario referred to in paragraph 3 the following elements shall be shown:
  - (a) the flood extent;
  - (b) water depths or water level, as appropriate;
  - (c) where appropriate, the flow velocity or the relevant water flow.

## BILATERAL CONFERENCE

Radenci, Slovenia  
8. - 9. May 2019

### 4.1 Austria

**Austria**

#### General information

The flood maps of Austria are produced by the Federal Ministry for Agriculture, Forestry, Environment and Water Management. Two types of maps are being produced:

- Flood plain maps
- Flood hazard maps

Flood plain maps are provided for about 5000 km of river stretches on a scale between 1:5.000 and 1:10.000. A second group of flood plain maps are called Hochwasser Risikozonierung Austria (HORA). These maps are an example of insurance maps and as such are further discussed in Chapter 6.2.

Flood hazard maps are produced for limited areas on scales between 1:1.000 and 1:5.000 with an accompanying text. They show expected flood extension for a return period of 1/100 years. For both types of maps, information is provided on methodology, accuracy, etc. Hazard is expressed in two classes: yellow and red, which is determined by a combination of flood depth and flow velocity (Figure 4.1).

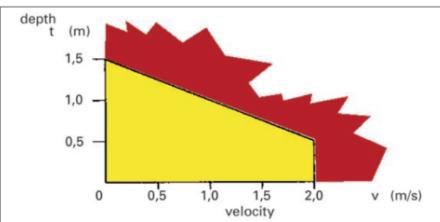

Figure 4.1 Criteria that determine medium and high risk using depth and velocity

The criteria used for the definition of flood hazard are given in detail in the following table.

Process	low intensity	medium intensity	high intensity
Debris flow	--	D < 1 m and v < 1 m/s	D > 1 m and v > 1 m/s
Static flooding	h < 0.5 m	0.5 < h < 2 m	h > 2 m
Dynamic flooding	q < 0.5 m <sup>2</sup> /s	0.5 < q < 2 m <sup>2</sup> /s	q > 2 m <sup>2</sup> /s
Bank erosion	t < 0.5 m	0.5 < t < 2 m	t > 2 m

**Switzerland**

D = thickness of debris front  
v = flow velocity (flood or debris flow)  
h = flow depth  
q = specific discharge ( $m^3/s/m$ ) =  $h \times v$   
t = extent of lateral erosion

Criteria for intensity of different hazards

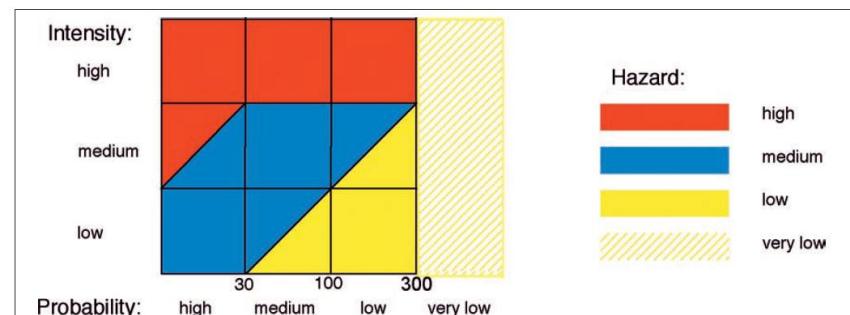

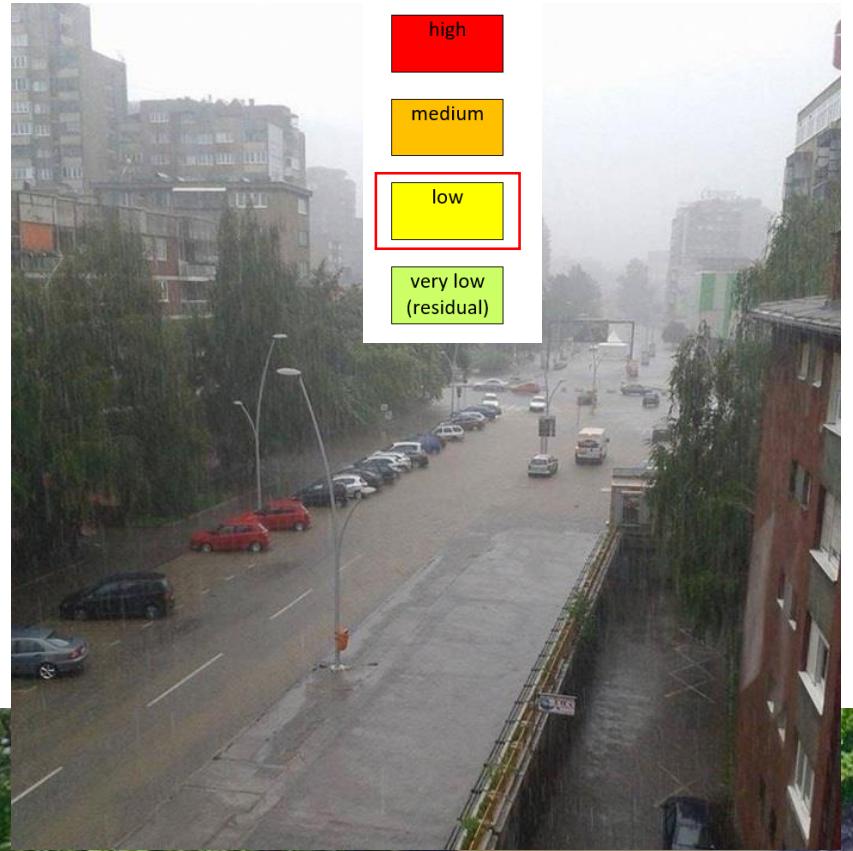

Figure 4.98 Assessment of flood hazard in Switzerland

### 3.2 Hidrološki podatki

Hidrološki podatki so povzeti po študiji Hidrološka študija reke Mure (FGG, januar 2012, v nadaljevanju »hidrološka študija FGG«). V študiji je obravnavano celotno porečje reke Mure od izvira v Avstriji do sotočja z Dravo na meji med Hrvaško in Madžarsko. V nadaljevanju so povzete vrednosti pretokov s povratnimi dobami iz omenjene študije.

## Flood risk mapping ???

### Flood Directive

5. Flood risk maps shall show the potential adverse consequences associated with flood scenarios referred to in paragraph 3 and expressed in terms of the following:
  - (a) the indicative number of inhabitants potentially affected;
  - (b) type of economic activity of the area potentially affected;
  - (c) installations as referred to in Annex I to Council Directive 96/61/EC of 24 September 1996 concerning integrated pollution prevention and control (<sup>(1)</sup>) which might cause accidental pollution in case of flooding and potentially affected protected areas identified in Annex IV(1)(i), (iii) and (v) to Directive 2000/60/EC;
  - (d) other information which the Member State considers useful such as the indication of areas where floods with a high content of transported sediments and debris floods can occur and information on other significant sources of pollution.

5 categories ??:

1. Population
2. Economic activities
3. Protected areas (water sources)
4. Cultural and historical monuments
5. IPPC facilities

Stran 12208 / Št. 89 / 19. 9. 2008

Uradni list Republike Slovenije

## PRILOGA 1

1. Na območjih poplav in erozije so posegi v prostor iz priloge 1 te uredbe, označeni z oznako »+«, dovoljeni, z upoštevanjem pogojev iz vodnega soglasja.
2. Na območjih poplav in z njimi povezane erozije so posegi v prostor iz priloge 1 te uredbe, označeni z oznako »-«, prepovedani.
3. Na območjih poplav in z njimi povezane erozije so posegi v prostor iz priloge 1 te uredbe, označeni z oznako »—1«, prepovedani. Dovoljeni so le na območju strnjeno grajenih stavb enakovrstne namembnosti v obstoječih naseljih, kadar je mogoče s predhodno izvedenimi omilitvenimi ukrepi in v skladu s smernicami ali pogoji vodnega soglasja zagotoviti, da vpliv načrtovanega posega v prostor ni bistven.
4. Na območjih poplav in erozije so posegi v prostor iz priloge 1 te uredbe, označeni z oznako »—2«, prepovedani. Dovoljeni so le če, ugotovitve celovite presoje vplivov na okolje ali presoje vplivov na okolje niso ocenjene kot uničujoče ali bistvene in je mogoče s predhodno izvedbo omilitvenih ukrepov v skladu z okoljevarstvenim dovoljenjem ali vodnim soglasjem zagotoviti, da njihov vpliv ni bistven.

## PRILOGA 2

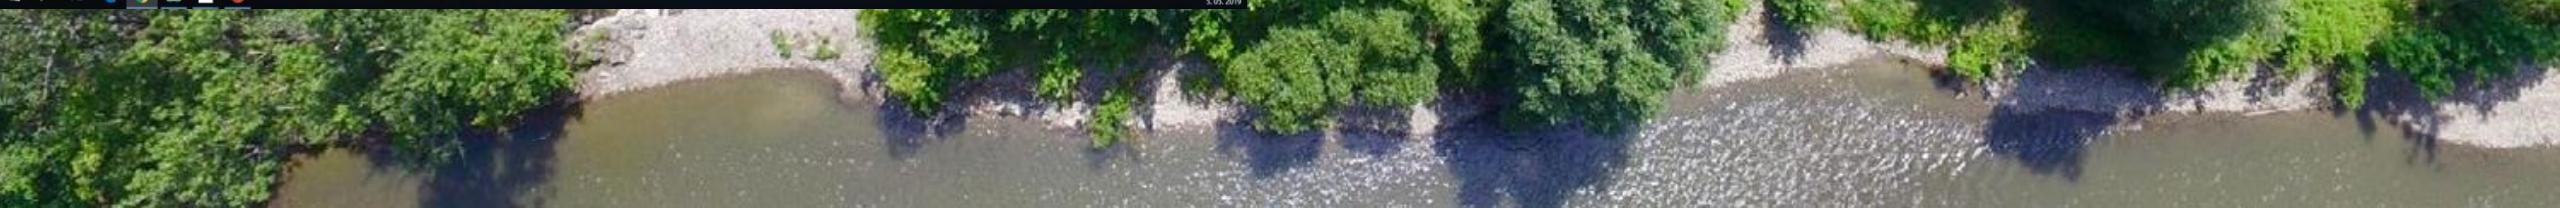

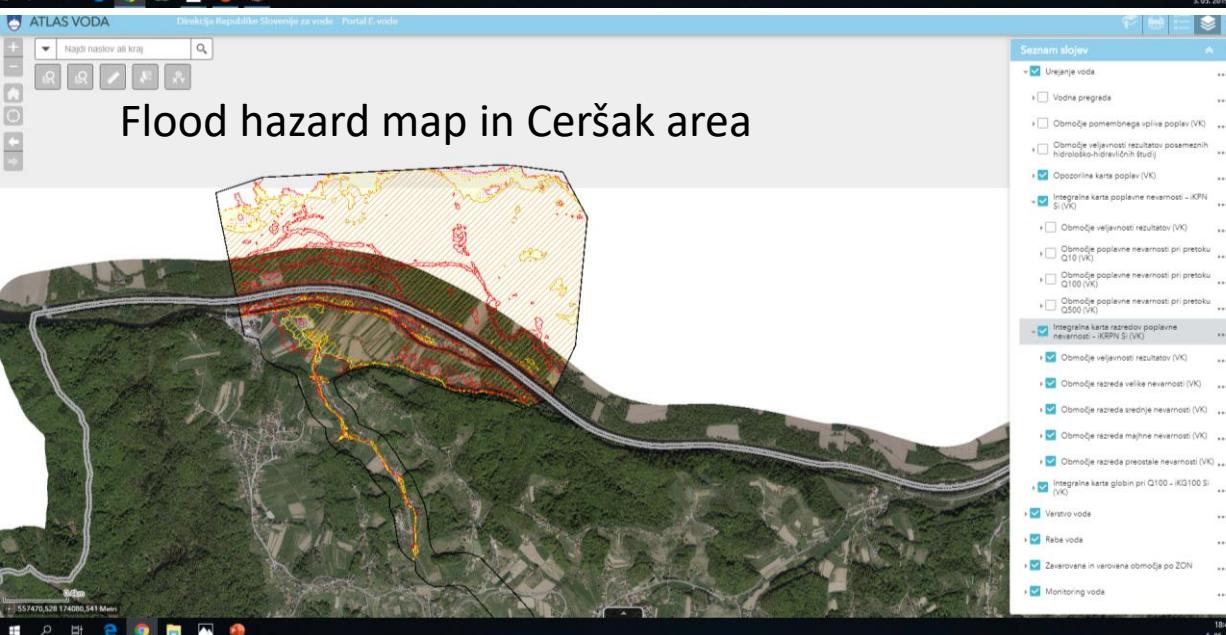

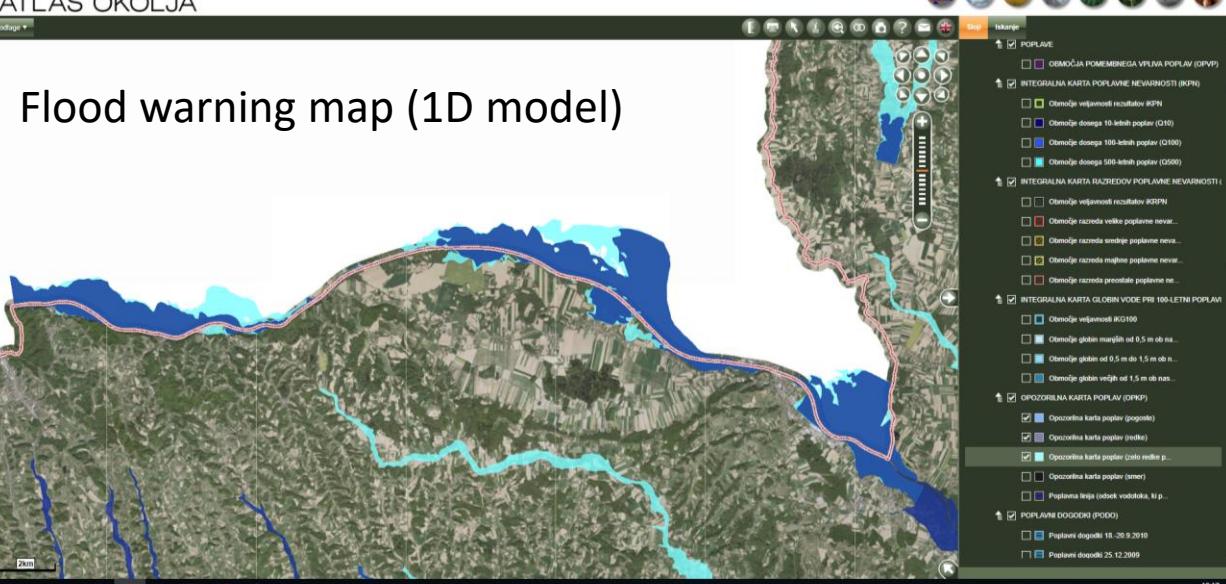

### Pogoji in omejitve za izvajanje dejavnosti:

1. Izvajanje dejavnosti, označenih z »+«, je dovoljeno v skladu s pogoji okoljevarstvenega dovoljenja oziroma vodnega soglasja, ker je v postopku celovite presoje vplivov na okolje ali presoje vplivov na okolje vpliv dejavnosti ocenjen kot nebistven oziroma ga ni ali pa je pozitiven.
2. Izvajanje dejavnosti, označenih z »X«, je prepovedano, ker je v postopku celovite presoje vplivov na okolje ali presoje vplivov na okolje vpliv dejavnosti ocenjen kot uničujoč glede na okoljske cilje po predpisih o varstvu okolja in lahko ogrozi dobro stanje voda po predpisih o vodah ali cilje zmanjševanja škodljivega delovanja voda po predpisih o vodah in varstvu pred naravnimi in drugimi nesrečami.
3. Izvajanje dejavnosti, označenih z »?«, je prepovedano. Dovoljeno je le, kadar ugotovitve celovite presoje vplivov na okolje ali presoje vplivov na okolje, po predpisih o varstvu okolja niso ocenjene kot uničujoče ali bistvene in je mogoče s poprejšnjo izvedbo omilitvenih ukrepov v skladu z okoljevarstvenim dovoljenjem po predpisih o varstvu okolja ali vodnim soglasjem po predpisih o vodah zagotoviti, da njihov vpliv ni bistven.

Dejavnosti iz 7. člena te uredbe	Pogoji in omejitve			
	Razred nevarnosti			
	Velika	Srednja	Majhna	Preostalo
1. Dejavnosti v obratih in napravah, zaradi katerih lahko nastane onesnaženje večjega obsega, ali/ in dejavnosti, ki pomenijo nevarnost za nastanek nesreč po predpisih o naravnih in drugih nesrečah	✗	✗	✗	†
2. Dejavnosti, ki zaradi občasnega ali stalnega zadrževanja večjega števila ljudi lahko škodljivo vplivajo na človekovo zdravje (na primer: bolnišnice, zdravilišča, šole, vrtci, domovi za starejše občane, podzemne garaže)	✗	✗	✗	†
3. Dejavnosti, povezane z varovanjem in hranjenjem premične kulturne dediščine ter dokumentarnega in arhivskega gradiva (na primer: knjižnice, arhivi, muzeji in druge podobne dejavnosti)	✗	✗	†	✓
4. Dejavnosti, povezane s skladščenjem za vodno okolje nevarnih snovi, določenih s predpisi o varstvu okolja	✗	✗	†	✓
5. Dejavnosti, namenjene zaščiti in reševanju ob naravnih in drugih nesrečah (gasilci, enote C2, zdravstvene intervencije enote)	✗	✗	✗	✗
